

Quality and commitment
for a sustainable future

About us

Amiat (Azienda Multiservizi Igiene Ambientale Torino) S.p.A. is a company of the Iren Group, 20% owned by the Municipality of Turin, which manages **urban hygiene and waste collection and disposal services** in an integrated manner across the city. Its mission is to promote the transition towards a **circular economy** and **protect the environment** while ensuring high service quality.

Thanks to innovative solutions and sustainable processes, Amiat works every day for a cleaner and safer city, **committed to safeguarding the local environment**, ensuring operational efficiency, regulatory compliance, and management models aimed at reducing environmental impact and enhancing resource recovery.

Waste Collection and Urban Hygiene

Amiat plays a key role in **waste management and urban hygiene**: each year it handles the collection of over **430,000 tonnes of waste**, including about **250,000 tonnes** originating from sorted waste collection. It manages the city's **Recycling Centres**, the collection service at **local markets, door-to-door collection and the disposal of bulky waste**.

Waste collection is organised throughout the city through **street-side kerbside bins and door-to-door services**.

Amiat provides urban hygiene services across the entire municipal area (approximately 130 km²), including the city's extensive green spaces. Activities include manual and mechanised cleaning of streets, public transport stops, school pavements, riverbanks, and local markets.

Complementary urban hygiene services include **emptying public litter bins, leaf collection, cleaning playgrounds and public toilets, and maintaining drainage pits and inspection chambers**.

Amiat also manages **winter road maintenance**, performing anti-icing salt distribution and snow removal across 1,160 km of roads, including hilly areas, with intervention levels adjusted according to weather conditions.

Recycling Centres

Amiat manages **8 Recycling Centres**, dedicated to the separate disposal of waste by private citizens residing in the Municipality of Turin.

Items that can be delivered free of charge include:

- **Recyclable materials**: paper, glass, plastic, organic waste, metals, textiles, wood, green clippings, toner, ink cartridges, used eyeglasses;
- **Hazardous household waste**: expired medicines, syringes, used oils, batteries, accumulators, paints;
- **Bulky waste and WEEE** (Waste Electrical and Electronic Equipment).

Plants

All waste collected by Amiat is either **reintroduced into new production cycles** or disposed of responsibly, leveraging the plant network of the Iren Group's environmental division, Iren Ambiente. Sorted waste is transferred to **recovery and sorting plants** belonging to national consortia and authorised facilities. Most fractions—such as paper, plastics, organic waste (OFMSW), and street sweeping residues—are treated in plants managed directly by Amiat or other Iren Group companies. The residual unsorted urban waste (RUR) is sent to the **TRM waste-to-energy plant** in Turin, which recovers the energy contained in the waste to produce electricity and heat.

CIRCULAR PLASTIC

The Plastic Selection and Storage Centre in Borgaro Torinese (TO), launched in **2023**, is one of the **most advanced sorting facilities in Italy**. It significantly contributes to improving the value of plastic waste collection thanks to cutting-edge technologies and optimised processes.

Authorised quantity: **100,000 tonnes/year**

RISMA - Amiat Integrated Material Recovery and Sorting

The RISMA plant, located in Collegno (TO), became operational in **2025**. It features **high-efficiency technology** designed to maximise both the quality and quantity of paper recycling. The system relies on **advanced separation technologies with optical readers and image analysis**.

Authorised quantity: **66,500 tonnes/year**

Commercial services

Leveraging its extensive experience in environmental hygiene and its synergy with other Iren Group companies, **Amiat offers a wide range of services** to businesses, public institutions, condominium complexes, commercial activities, private individuals, and professionals.

After a detailed assessment of customer needs, Amiat provides customised, full-service solutions, ensuring professionalism, expertise, competitive pricing, and full compliance with environmental regulations.

Available services include:

- Transport and treatment of **special and hazardous waste**;
- Transport and treatment of **WEEE**;
- **Sanitation, rodent control, cockroach control and pest control**;
- **Graffiti** removal;
- Setting out bins **for separate collection**.

The laboratory

The **Amiat Laboratory** in Turin, part of the Iren Laboratori network, is a **strategic facility for environmental monitoring and safety**.

It provides:

- **Chemical and microbiological analysis**;
- **Environmental sampling and monitoring**;
- **Technical consultancy and applied research**.

Through collaboration with laboratories in Piacenza and Genoa, Amiat ensures high standards of quality and reliability, supporting waste management and commercial services with advanced scientific expertise.
